

Reference > draggable()

draggable()

Makes the element draggable.

The parameter, `elmnt`, is optional. If another `p5.Element` object is passed, as in `myElement.draggable(otherElement)`, the other element will become draggable.

Examples

```
let stickyNote;  
let textInput;  
  
function setup() {  
  createCanvas(100, 100);  
  
  background(200);  
  
  // Create a div element and style it.  
  stickyNote = createDiv('Note');  
  stickyNote.position(5, 5);  
  stickyNote.size(80, 20);  
  stickyNote.style('font-size', '16px');  
  stickyNote.style('font-family', 'Comic Sans MS');  
  stickyNote.style('background', 'orchid');  
  stickyNote.style('padding', '5px');  
  
  // Make the note draggable.  
  stickyNote.draggable();  
  
  // Create a panel div and style it.  
  let panel = createDiv('');  
  panel.position(5, 40);  
  panel.size(80, 50);  
  panel.style('background', 'orchid');  
  panel.style('font-size', '16px');  
  panel.style('padding', '5px');
```

Syntax

```
draggable([elmnt])
```

Parameters

`elmnt` `p5.Element`: another `p5.Element`.
