

Reference > green()

green()

Gets the green value of a color.

`green()` extracts the green value from a `p5.Color` object, an array of color components, or a CSS color string.

By default, `green()` returns a color's green value in the range 0 to 255. If the `colorMode()` is set to RGB, it returns the green value in the given range.

Examples

```
function setup() {
  createCanvas(100, 100);

  background(200);

  // Create a p5.Color object.
  let c = color(175, 100, 220);

  // Draw the left rectangle.
  noStroke();
  fill(c);
  rect(15, 15, 35, 70);

  // Set 'greenValue' to 100.
  let greenValue = green(c);

  // Draw the right rectangle.
  fill(0, greenValue, 0);
  rect(50, 15, 35, 70);

  describe('Two rectangles. The left one is light purple and the right one is dark green.');
```

```
function setup() {
  createCanvas(100, 100);

  background(200);

  // Create a color array.
  let c = [175, 100, 220];

  // Draw the left rectangle.
  noStroke();
  fill(c);
  rect(15, 15, 35, 70);

  // Set 'greenValue' to 100.
  let greenValue = green(c);

  // Draw the right rectangle.
  fill(0, greenValue, 0);
  rect(50, 15, 35, 70);

  describe('Two rectangles. The left one is light purple and the right one is dark green.');
```

```
function setup() {
  createCanvas(100, 100);

  background(200);

  // Create a CSS color string.
  let c = 'rgb(175, 100, 220)';

  // Draw the left rectangle.
  noStroke();
  fill(c);
  rect(15, 15, 35, 70);

  // Set 'greenValue' to 100.
  let greenValue = green(c);

  // Draw the right rectangle.
  fill(0, greenValue, 0);
  rect(50, 15, 35, 70);

  describe('Two rectangles. The left one is light purple and the right one is dark green.');
```

```
function setup() {
  createCanvas(100, 100);

  background(200);

  // Use RGB color with values in the range 0-100.
  colorMode(RGB, 100);

  // Create a p5.Color object using RGB values.
  let c = color(69, 39, 86);

  // Draw the left rectangle.
  noStroke();
  fill(c);
  rect(15, 15, 35, 70);

  // Set 'greenValue' to 39.
  let greenValue = green(c);

  // Draw the right rectangle.
  fill(0, greenValue, 0);
  rect(50, 15, 35, 70);

  describe('Two rectangles. The left one is light purple and the right one is dark green.');
```

Syntax

`green(color)`

Parameters

`color` `p5.Color`|`Number[]`|`String`: `p5.Color` object, array of color components, or CSS color string.

Returns

Number: the green value.
