

findRows()

Finds the rows in the Table that contain the value provided, and returns references to those rows. Returns an Array, so for must be used to iterate through all the rows, as shown in the example above. The column to search may be specified by either its ID or title.

Examples

```
// Given the CSV file "mammals.csv"
// in the project's "assets" folder:
//
// id,species,name
// 0,Capra hircus,Goat
// 1,Panthera pardus,Leopard
// 2,Equus zebra,Zebra

let table;

function preload() {
  //my table is comma separated value "csv"
  //and has a header specifying the columns labels
  table = loadTable('/assets/mammals.csv', 'csv', 'header');
}

function setup() {
  //add another goat
  let newRow = table.addRow();
  newRow.setString('id', table.getRowCount() - 1);
  newRow.setString('species', 'Scape Goat');
  newRow.setString('name', 'Goat');

  //find the rows containing animals named Goat
  let rows = table.findRows('Goat', 'name');
  print(rows.length + ' Goats found');
}
```

Syntax

```
findRows(value, column)
```

Parameters

value String: The value to match
 column Integer|String: ID number or title of the column to search

Returns

p5.TableRow[]: An Array of TableRow objects
