

normalMaterial()

Sets the current material as a normal material.

A normal material sets surfaces facing the x-axis to red, those facing the y-axis to green, and those facing the z-axis to blue. Normal material isn't affected by light. It's often used as a placeholder material when debugging.

Note: `normalMaterial()` can only be used in WebGL mode.

Examples

```
// Click and drag the mouse to view the scene from different angles.

function setup() {
  createCanvas(100, 100, WEBGL);

  describe('A multicolor torus drawn on a gray background.');
}

function draw() {
  background(200);

  // Enable orbiting with the mouse.
  orbitControl();

  // Style the torus.
  normalMaterial();

  // Draw the torus.
  torus(30);
}
```

Related References

copyToContext

Copies the shader from one drawing context to another.

inspectHooks

Logs the hooks available in this shader, and their current implementation.

modify

Returns a new shader, based on the original, but with custom snippets of shader code replacing default behaviour.

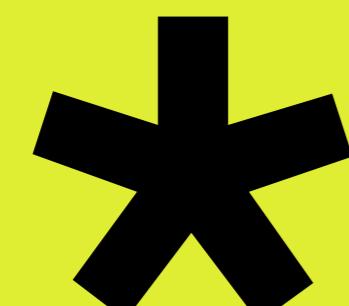

setUniform

Sets the shader's uniform (global) variables.
