

getObject()

Retrieves all table data and returns as an object. If a column name is passed in, each row object will be stored with that attribute as its title.

Examples

```
// Given the CSV file "mammals.csv"
// in the project's "assets" folder:
//
// id,species,name
// 0,Capra hircus,Goat
// 1,Panthera pardus,Leopard
// 2,Equus zebra,Zebra

let table;

function preload() {
  //my table is comma separated value "csv"
  //and has a header specifying the columns labels
  table = loadTable('/assets/mammals.csv', 'csv', 'header');
}

function setup() {
  let tableObject = table.getObject();

  print(tableObject);
  //outputs an object

  describe('no image displayed');
}
```

Syntax

```
getObject([headerColumn])
```

Parameters

headerColumn String: Name of the column which should be used to title each row object (optional)

Returns

Object:
