

# createP()

Creates a paragraph element.

elements are commonly used for paragraph-length text.

The parameter `html` is optional. It accepts a string that sets the inner HTML of the new

## Examples

Tell me a story.

```
function setup() {
  createCanvas(100, 100);

  background(200);

  // Create a paragraph element and set its position.
  let p = createP('Tell me a story.');
  p.position(5, 0);

  describe('A gray square displaying the text "Tell me a story." written in black.');
}
```

## Syntax

```
createP([html])
```

## Parameters

`html` String: inner HTML for the new `<p></p>` element.

## Returns

p5.Element: new `p5.Element` object.
