

accelerationZ

The system variable `accelerationZ` always contains the acceleration of the device along the z axis. Value is represented as meters per second squared.

Examples

```
// Move a touchscreen device to register
// acceleration changes.

function draw() {
  background(220, 50);
  fill('magenta');
  ellipse(width / 2, height / 2,
  accelerationZ);
  describe('Magnitude of device acceleration
  is displayed as ellipse size');
}
```
