

# getURLParams()

Returns the current **URL parameters** in an **Object**.

For example, calling `getURLParams()` in a sketch hosted at the URL

`https://p5js.org?year=2014&month=May&day=15` returns `{ year: 2014, month: 'May', day: 15 }`.

## Examples

```
// Imagine this sketch is hosted at the following URL:  
// https://p5js.org?year=2014&month=May&day=15  
  
function setup() {  
  background(200);  
  
  // Get the sketch's URL  
  // parameters and display  
  // them.  
  let params = getURLParams();  
  text(params.day, 10, 20);  
  text(params.month, 10, 40);  
  text(params.year, 10, 60);  
  
  describe('The text "15", "May", and "2014" written in black on separate  
  lines.');//
```

## Returns

Object: URL params
