

subtype

The file subtype as a string.

For example, a file with an `'image'` MIME type may have a subtype such as `png` or `jpeg`.

Examples

```
// Use the file input to load a
// file and display its info.

function setup() {
  createCanvas(100, 100);

  background(200);

  // Create a file input and place it beneath the canvas.
  // Call displaySubtype() when the file loads.
  let input = createFileInput(displaySubtype);
  input.position(0, 100);

  describe('A gray square with a file input beneath it. If the
  user loads a file, its subtype is written in black.');
}

// Display the p5.File's type once it loads.
function displaySubtype(file) {
  background(200);

  // Display the p5.File's subtype.
  text(`This file's subtype is: ${file.subtype}`, 10, 10,
  80, 80);
}
```
