

winMouseX

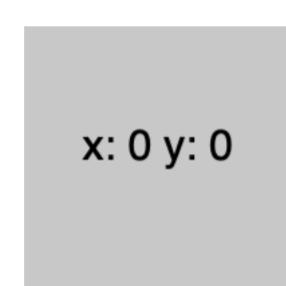

A `Number` variable that tracks the mouse's horizontal position within the browser.

`winMouseX` keeps track of the mouse's position relative to the top-left corner of the browser window. For example, if the mouse is 50 pixels from the left edge of the browser, then `winMouseX` will be 50.

On a touchscreen device, `winMouseX` will hold the x-coordinate of the most recent touch point.

Note: Use `mouseX` to track the mouse's x-coordinate within the canvas.

Examples

```

function setup() {
  createCanvas(100, 100);

  describe("A gray square. The mouse's x- and y-coordinates are displayed as the user moves the mouse.");
}

function draw() {
  background(200);

  // Style the text.
  textAlign(CENTER);
  textSize(16);

  // Display the mouse's coordinates within the browser window.
  text(`x: ${winMouseX} y: ${winMouseY}`, 50, 50);
}

```
