class()

Adds a class attribute to the element using a given string.

Calling `myElement.class()` without an argument returns a string with its current classes.

Examples

small ▶ ■

```
function setup() {
  // Create a canvas element and
  // assign it to cnv.
  let cnv = createCanvas(100, 100);

  background(200);

  // Add the class "small" to the
  // canvas element.
  cnv.class('small');

  // Get the canvas element's class
  // and display it.
  let c = cnv.class();
  text(c, 35, 54);

  describe('The word "small" written in black on a gray canvas.');

}
```

Syntax

```
class(class)
```

```
class()
```

Parameters

class   String: class to add.
